Contents

Preface ................................................................. v

On generalized cluster categories
Claire Amiot .......................................................... 1

Module categories for finite group algebras
David J. Benson, Srikanth B. Iyengar and Henning Krause ................. 55

On cluster theory and quantum dilogarithm identities
Bernhard Keller ....................................................... 85

Quantum loop algebras, quiver varieties, and cluster algebras
Bernard Leclerc ..................................................... 117

Weighted projective lines and applications
Helmut Lenzing .................................................... 153

Cohomology of block algebras of finite groups
Markus Linckelmann .............................................. 189

Algebras with separating Auslander–Reiten components
Piotr Malicki and Andrzej Skowroński .................................. 251

Classification problems in noncommutative algebraic geometry
and representation theory
Izuru Mori ........................................................... 355

Periodicities in cluster algebras and dilogarithm identities
Tomoki Nakanishi .................................................. 407

The Tits forms of tame algebras and their roots
José Antonio de la Peña and Andrzej Skowroński ......................... 445

The minimal representation-infinite algebras which are special biserial
Claus Michael Ringel ............................................. 501
Coalgebras of tame comodule type, comodule categories, and a tame-wild dichotomy problem
Daniel Simson ............................................................. 561

Singularities of orbit closures in module varieties
Grzegorz Zwara ........................................................... 661

List of Contributors ........................................................ 727
