Preface	v
<b>1 Global and local spaces</b>	<b>1</b>
1.1 Introduction	1
1.2 Global spaces	1
1.2.1 Definitions	1
1.2.2 Atoms	4
1.2.3 Wavelets	7
1.2.4 Homogeneity	9
1.2.5 Multiplication algebras	12
1.2.6 Fourier multipliers	13
1.3 Local spaces: Definitions and basic assertions	18
1.3.1 Definitions	18
1.3.2 Wavelet characterizations	22
1.3.3 Atomic characterizations	27
1.3.4 Morrey smoothness and frequency approximation spaces	32
1.3.5 Morreyfication	39
<b>2 Local spaces: Properties</b>	<b>45</b>
2.1 Embeddings	45
2.1.1 Embeddings in Hölder–Zygmund spaces	45
2.1.2 Standard embeddings	48
2.1.3 Limiting embeddings	50
2.1.4 Spaces on domains	54
2.2 Characterizations by differences	61
2.2.1 Global spaces on domains	61
2.2.2 Uniform spaces	63
2.2.3 Main assertions	65
2.3 Homogeneity	72
2.3.1 Basic homogeneity	72
2.3.2 Refined homogeneity	74
2.3.3 Polynomial approximations	79
2.4 Caloric wavelets and lifts	81
2.4.1 Preliminaries	81
2.4.2 Caloric wavelets	84
2.4.3 Lifts	88
2.5 Multiplication algebras	89
2.5.1 Preliminaries	89
2.5.2 Main assertions	91
2.6 Pseudodifferential operators and truncated Riesz transforms	95

2.6.1	Pseudodifferential operators . . . . .	95
2.6.2	Truncated Riesz transforms . . . . .	97
2.7	Complements . . . . .	98
2.7.1	Pointwise multipliers and diffeomorphisms . . . . .	98
2.7.2	Uniform spaces . . . . .	100
2.7.3	Fourier-analytical characterizations . . . . .	101
<b>3</b>	<b>Morrey–Campanato spaces</b> . . . . .	<b>108</b>
3.1	Definitions and basic properties . . . . .	108
3.1.1	Definitions . . . . .	108
3.1.2	Basic assertions . . . . .	111
3.2	Embeddings . . . . .	113
3.2.1	Embeddings of Lorentz spaces into Morrey spaces . . . . .	113
3.2.2	Embeddings of Morrey spaces into uniform spaces . . . . .	116
3.3	Relations to local spaces . . . . .	121
3.3.1	Main assertions . . . . .	121
3.3.2	Limiting embeddings . . . . .	122
3.3.3	Embeddings of local spaces into Morrey spaces . . . . .	124
3.4	Complements . . . . .	126
3.4.1	Embeddings into $bmo$ . . . . .	126
3.4.2	Spaces of measurable functions . . . . .	127
3.4.3	Morrey measure spaces . . . . .	129
<b>4</b>	<b>Gagliardo–Nirenberg inequalities</b> . . . . .	<b>131</b>
4.1	Introduction . . . . .	131
4.2	Global spaces . . . . .	133
4.2.1	Norms in Sobolev spaces . . . . .	133
4.2.2	The non-critical case . . . . .	137
4.2.3	The critical case . . . . .	145
4.2.4	Growth envelopes . . . . .	148
4.3	Local spaces . . . . .	151
4.3.1	Preliminaries . . . . .	151
4.3.2	The non-critical case . . . . .	153
4.3.3	The critical case . . . . .	156
4.4	Final comments . . . . .	157
<b>5</b>	<b>Heat equations</b> . . . . .	<b>159</b>
5.1	Introduction and preliminaries . . . . .	159
5.1.1	Introduction . . . . .	159
5.1.2	Preliminaries . . . . .	161
5.2	Homogeneous heat equations . . . . .	163
5.2.1	Caloric shift spaces approximation . . . . .	163
5.2.2	Behaviour at time infinity . . . . .	167
5.2.3	Behaviour at time zero . . . . .	171

5.2.4	A comment on lifted shift space approximation . . . . .	174
5.3	Inhomogeneous heat equations . . . . .	176
5.3.1	Prerequisites . . . . .	176
5.3.2	Inequalities . . . . .	177
5.4	Nonlinear heat equations . . . . .	179
5.4.1	Prerequisites . . . . .	179
5.4.2	Local spaces: special cases . . . . .	180
5.4.3	Local spaces: general cases . . . . .	182
5.4.4	Global spaces . . . . .	187
<b>6</b>	<b>Navier–Stokes equations</b> . . . . .	<b>191</b>
6.1	Introduction and preliminaries . . . . .	191
6.1.1	Introduction . . . . .	191
6.1.2	Duhamel formula and Leray projector . . . . .	194
6.1.3	Reformulation in global spaces . . . . .	196
6.1.4	Reformulation in local spaces . . . . .	198
6.2	Navier–Stokes equations in function spaces . . . . .	201
6.2.1	Global spaces . . . . .	201
6.2.2	Local spaces . . . . .	205
6.2.3	Global versus local . . . . .	206
6.2.4	Beyond multiplication algebras, a proposal . . . . .	207
6.2.5	Complements and comments . . . . .	209
	Bibliography . . . . .	215
	Symbols . . . . .	229
	Index . . . . .	231
