Preface	v
A Preliminaries	1
1 Maps and Topologies	1
2 Connectedness and Topological Dimension	19
B Topological Groups	26
3 Basic Definitions and Results	26
4 Subgroups	43
5 Linear Groups over Topological Rings	50
6 Quotients	53
7 Solvable and Nilpotent Groups	66
8 Completion	72
C Topological Transformation Groups	91
9 The Compact-Open Topology	91
10 Transformation Groups	99
11 Sets, Groups, and Rings of Homomorphisms	105
D The Haar Integral	113
12 Existence and Uniqueness of Haar Integrals	113
13 The Module Function	123
14 Applications to Linear Representations	128
E Categories of Topological Groups	143
15 Categories	143
16 Products in Categories of Topological Groups	147
17 Direct Limits and Projective Limits	156
18 Projective Limits of Topological Groups	165
19 Compact Groups	169
F Locally Compact Abelian Groups	174
20 Characters and Character Groups	174
21 Compactly Generated Abelian Lie Groups	181
22 Pontryagin's Duality Theorem	191
23 Applications of the Duality Theorem	194
24 Maximal Compact Subgroups and Vector Subgroups	203

25	Automorphism Groups of Locally Compact Abelian Groups . . .	207
26	Locally Compact Rings and Fields	212
27	Homogeneous Locally Compact Groups	230
G	Locally Compact Semigroups	242
28	Topological Semigroups	242
29	Embedding Cancellative Directed Semigroups into Groups	250
30	Compact Semigroups	254
31	Groups with Continuous Multiplication	259
H	Hilbert's Fifth Problem	261
32	The Approximation Theorem	261
33	Dimension of Locally Compact Groups	264
34	The Rough Structure	268
35	Notions of Simplicity	272
36	Compact Groups	276
37	Countable Bases, Metrizable	279
38	Non-Lie Groups of Finite Dimension	280
39	Arcwise Connected Subgroups	281
40	Algebraic Groups	285
	Bibliography	287
	Index of Symbols	291
	Subject Index	297
