Preface . . . . .	v
<b>1 Elements of homology theory</b>	<b>1</b>
1.1 Categories and functors . . . . .	1
1.2 Some geometric properties of $\mathbb{R}^N$ . . . . .	4
1.3 Chain complexes . . . . .	7
1.4 Homology groups of a simplicial complex . . . . .	10
1.5 Simplicial maps . . . . .	13
1.6 Induced homomorphisms of homology groups . . . . .	17
1.7 Degrees of maps between manifolds . . . . .	18
1.8 Applications of the degree of a map . . . . .	23
1.9 Relative homology . . . . .	32
1.10 The exact homology sequence . . . . .	33
1.11 Axiomatic point of view on homology . . . . .	37
1.12 Digression to the theory of Abelian groups . . . . .	39
1.13 Calculation of homology groups . . . . .	41
1.14 Cellular homology . . . . .	43
1.15 Lefschetz fixed point theorem . . . . .	47
1.16 Homology with coefficients . . . . .	50
1.17 Elements of cohomology theory . . . . .	53
1.18 The Poincaré duality . . . . .	58
<b>2 Elements of homotopy theory</b>	<b>61</b>
2.1 Definition of the fundamental group . . . . .	61
2.2 Independence of the choice of the base point . . . . .	63
2.3 Presentations of groups . . . . .	65
2.4 Calculation of fundamental groups . . . . .	68
2.5 Wirtinger's presentation . . . . .	72
2.6 The higher homotopy groups . . . . .	74
2.7 Bundles and exact sequences . . . . .	76
2.8 Coverings . . . . .	79
Answers, hints, solutions . . . . .	83
Bibliography . . . . .	95
Index . . . . .	97
