<b>Preface</b>	v
<b>Part I Curves and surfaces</b>	<b>1</b>
<b>1 Theory of curves</b>	<b>3</b>
1.1 Basic notions of the theory of curves . . . . .	3
1.2 Plane curves . . . . .	5
1.3 Curves in three-dimensional space . . . . .	8
1.4 The orthogonal group . . . . .	10
<b>2 Theory of surfaces</b>	<b>15</b>
2.1 Metrics on regular surfaces . . . . .	15
2.2 Curvature of a curve on a surface . . . . .	17
2.3 Gaussian curvature . . . . .	20
2.4 Derivational equations and Bonnet's theorem . . . . .	22
2.5 The Gauss theorem . . . . .	27
2.6 Covariant derivative and geodesics . . . . .	28
2.7 The Euler–Lagrange equations . . . . .	32
2.8 The Gauss–Bonnet formula . . . . .	38
2.9 Minimal surfaces . . . . .	44
<b>Part II Riemannian geometry</b>	<b>47</b>
<b>3 Smooth manifolds</b>	<b>49</b>
3.1 Topological spaces . . . . .	49
3.2 Smooth manifolds and maps . . . . .	51
3.3 Tensors . . . . .	58
3.4 Action of maps on tensors . . . . .	63
3.5 Embedding of smooth manifolds into the Euclidean space . . . . .	67
<b>4 Riemannian manifolds</b>	<b>69</b>
4.1 Metric tensor . . . . .	69
4.2 Affine connection and covariant derivative . . . . .	70
4.3 Riemannian connections . . . . .	74
4.4 Curvature . . . . .	77
4.5 Geodesics . . . . .	83

---

<b>5</b>	<b>The Lobachevskii plane and the Minkowski space</b>	89
5.1	The Lobachevskii plane . . . . .	89
5.2	Pseudo-Euclidean spaces and their applications in physics . . . . .	95
<b>Part III Supplement chapters</b>		101
<b>6</b>	<b>Minimal surfaces and complex analysis</b>	103
6.1	Conformal parameterization of surfaces . . . . .	103
6.2	The theory of surfaces in terms of the conformal parameter . . . . .	107
6.3	The Weierstrass representation . . . . .	111
<b>7</b>	<b>Elements of Lie group theory</b>	117
7.1	Linear Lie groups . . . . .	117
7.2	Lie algebras . . . . .	124
7.3	Geometry of the simplest linear groups . . . . .	129
<b>8</b>	<b>Elements of representation theory</b>	135
8.1	The basic notions of representation theory . . . . .	135
8.2	Representations of finite groups . . . . .	140
8.3	On representations of Lie groups . . . . .	147
<b>9</b>	<b>Elements of Poisson and symplectic geometry</b>	154
9.1	The Poisson bracket and Hamilton's equations . . . . .	154
9.2	Lagrangian formalism . . . . .	163
9.3	Examples of Poisson manifolds . . . . .	166
9.4	Darboux's theorem and Liouville's theorem . . . . .	170
9.5	Hamilton's variational principle . . . . .	177
9.6	Reduction of the order of the system . . . . .	180
9.7	Euler's equations . . . . .	190
9.8	Integrable Hamiltonian systems . . . . .	194
	Bibliography	205
	Index	207
