Introduction	ix
<b>I Algebras and modules</b>	<b>1</b>
1 Algebras . . . . .	1
2 Representations of algebras and modules . . . . .	12
3 The Jacobson radical . . . . .	30
4 The Krull–Schmidt theorem . . . . .	41
5 Semisimple modules . . . . .	45
6 Semisimple algebras . . . . .	56
7 The Jordan–Hölder theorem . . . . .	67
8 Projective and injective modules . . . . .	73
9 Hereditary algebras . . . . .	93
10 Nakayama algebras . . . . .	100
11 The Grothendieck group and the Cartan matrix . . . . .	105
12 Exercises . . . . .	109
<b>II Morita theory</b>	<b>123</b>
1 Categories and functors . . . . .	123
2 Bimodules . . . . .	125
3 Tensor products of modules . . . . .	133
4 Adjunctions and natural isomorphisms . . . . .	140
5 Progenerators . . . . .	151
6 Morita equivalence . . . . .	157
7 Morita–Azumaya duality . . . . .	175
8 Exercises . . . . .	188
<b>III Auslander–Reiten theory</b>	<b>203</b>
1 The radical of a module category . . . . .	203
2 The Harada–Sai lemma . . . . .	207
3 The space of extensions . . . . .	209
4 The Auslander–Reiten translations . . . . .	232
5 The Nakayama functors . . . . .	247
6 The Auslander–Reiten formulas . . . . .	252
7 Irreducible and almost split homomorphisms . . . . .	257
8 Almost split sequences . . . . .	269
9 The Auslander–Reiten quiver . . . . .	282
10 The Auslander theorem . . . . .	301

11	The Bautista–Smalø theorem . . . . .	312
12	Exercises . . . . .	314
<b>IV</b>	<b>Selfinjective algebras</b>	<b>332</b>
1	The Frobenius theorem . . . . .	332
2	The Brauer–Nesbitt–Nakayama theorems . . . . .	336
3	Frobenius algebras . . . . .	345
4	Symmetric algebras . . . . .	355
5	Simple algebras . . . . .	368
6	The Nakayama theorems . . . . .	375
7	Non-Frobenius selfinjective algebras . . . . .	386
8	The syzygy functors . . . . .	392
9	The higher extension spaces . . . . .	402
10	Periodic modules . . . . .	414
11	Periodic algebras . . . . .	427
12	The Green–Snashall–Solberg theorems . . . . .	442
13	Dynkin and Euclidean graphs . . . . .	447
14	Canonical mesh algebras of Dynkin type . . . . .	452
15	The Riedtmann–Todorov theorem . . . . .	455
16	Exercises . . . . .	470
<b>V</b>	<b>Hecke algebras</b>	<b>489</b>
1	Finite reflection groups . . . . .	489
2	Coxeter graphs . . . . .	499
3	The Coxeter theorems . . . . .	507
4	The Iwahori theorem . . . . .	515
5	Hecke algebras . . . . .	528
6	Exercises . . . . .	533
<b>VI</b>	<b>Hopf algebras</b>	<b>539</b>
1	Coalgebras . . . . .	539
2	Hopf algebras . . . . .	552
3	The Larson–Sweedler theorems . . . . .	584
4	The Radford theorem . . . . .	595
5	The Fischman–Montgomery–Schneider formula . . . . .	609
6	The module category . . . . .	616
7	Exercises . . . . .	630
	Bibliography	637
	Index	645
