Preface	v
1 Basics: decategorification and categorification	1
1.1 The idea of categorification	1
1.2 Grothendieck group	2
1.3 Decategorification	4
1.4 (Pre)categorification of an \mathbb{F} -module	4
1.5 Graded setup	5
1.6 Some constructions	6
2 Basics: from categorification of linear maps to 2-categories	9
2.1 Categorification of linear maps	9
2.2 Naïve categorification	9
2.3 Weak categorification	11
2.4 2-categories	12
2.5 (Genuine) categorification	14
3 Basics: 2-representations of finitary 2-categories	17
3.1 2-representations of 2-categories	17
3.2 Fiat-categories	18
3.3 Principal 2-representations of fiat-categories	19
3.4 Cells	20
3.5 Cells modules	20
3.6 Homomorphisms from a cell module	22
3.7 Serre subcategories and quotients	22
3.8 Naturally commuting functors	22
4 Category \mathcal{O}: definitions	25
4.1 Definition of category \mathcal{O}	25
4.2 Verma modules	26
4.3 Block decomposition	27
4.4 BGG reciprocity and quasi-hereditary structure	28
4.5 Tilting modules and Ringel self-duality	29
4.6 Parabolic category \mathcal{O}	30
4.7 \mathfrak{gl}_2 -example	31

5	Category \mathcal{O}: projective and shuffling functors	33
5.1	Projective functors	33
5.2	Translations through walls	34
5.3	Description via Harish-Chandra bimodules	35
5.4	Shuffling functors	36
5.5	Singular braid monoid	38
5.6	\mathfrak{gl}_2 -example	39
6	Category \mathcal{O}: twisting and completion	41
6.1	Zuckerman functors	41
6.2	Twisting functors	41
6.3	Completion functors	44
6.4	Alternative description via (co)approximations	45
6.5	Serre functor	46
7	Category \mathcal{O}: grading and combinatorics	47
7.1	Double centralizer property	47
7.2	Endomorphisms of the antidominant projective	48
7.3	Grading on B_λ	48
7.4	Hecke algebra	50
7.5	Categorification of the right regular \mathbb{H} -module	51
7.6	Combinatorics of \mathcal{O}_λ	52
8	\mathbb{S}_n-categorification: Soergel bimodules, cells and Specht modules	55
8.1	Soergel bimodules	55
8.2	Kazhdan–Lusztig cells	56
8.3	Cell modules	57
8.4	Categorification of the induced sign module	58
8.5	Categorification of Specht modules	59
9	\mathbb{S}_n-categorification: (induced) cell modules	61
9.1	Categories $\mathcal{O}^{\widehat{\mathcal{R}}}$	61
9.2	Categorification of cell modules	61
9.3	Categorification of permutation modules	62
9.4	Parabolic analogues of \mathcal{O}	64
9.5	Categorification of induced cell modules	65
10	Category \mathcal{O}: Koszul duality	67
10.1	Quadratic dual of a positively graded algebra	67
10.2	Linear complexes of projectives	68
10.3	Koszul duality	70
10.4	Koszul dual functors	72
10.5	Alternative categorification of the permutation module	72

11	\mathfrak{sl}_2-categorification: simple finite-dimensional modules	75
11.1	The algebra $U_v(\mathfrak{sl}_2)$	75
11.2	Finite dimensional representations of $U_v(\mathfrak{sl}_2)$	76
11.3	Categorification of $\mathcal{V}_1^{\otimes n}$	77
11.4	Categorification of \mathcal{V}_n	79
11.5	Koszul dual picture	80
12	Application: categorification of the Jones polynomial	81
12.1	Kauffman bracket and Jones polynomial	81
12.2	Khovanov’s idea for categorification of $J(L)$	82
12.3	Quantum \mathfrak{sl}_2 -link invariants	82
12.4	Functorial quantum \mathfrak{sl}_2 -link invariants	84
13	\mathfrak{sl}_2-categorification of Chuang and Rouquier	87
13.1	Genuine \mathfrak{sl}_2 -categorification	87
13.2	Affine Hecke algebras	88
13.3	Morphisms of \mathfrak{sl}_2 -categorifications	89
13.4	Minimal \mathfrak{sl}_2 -categorification of simple finite-dimensional modules	90
13.5	\mathfrak{sl}_2 -categorification on category \mathcal{O}	91
13.6	Categorification of the simple reflection	92
14	Application: blocks of $\mathbb{F}[\mathbb{S}_n]$ and Broué’s conjecture	93
14.1	Jucys–Murphy elements and formal characters	93
14.2	Induction and restriction	94
14.3	Categorification of the basic representation of an affine Kac–Moody algebra	95
14.4	Broué’s conjecture	95
14.5	Broué’s conjecture for \mathbb{S}_n	96
14.6	Divided powers	97
15	Applications of \mathbb{S}_n-categorifications	99
15.1	Wedderburn basis for $\mathbb{C}[\mathbb{S}_n]$	99
15.2	Kostant’s problem	100
15.3	Structure of induced modules	102
16	Exercises	105
	Bibliography	109
	Index	117
