Introduction	xi
General conventions	xv
1 Projective spaces and linear varieties	1
1.1 How projective spaces arise	1
1.2 Projective spaces	5
1.3 Linear varieties	7
1.4 Incidence of linear varieties	9
1.5 Linear independence of points	13
1.6 Projectivities	16
1.7 Projective invariance	18
1.8 Pappus' and Desargues' theorems	21
1.9 Projection, section and perspectivity	25
1.10 What is projective geometry about?	28
1.11 Exercises	30
2 Projective coordinates and cross ratio	34
2.1 Projective references	34
2.2 Projective coordinates	36
2.3 Change of coordinates	39
2.4 Absolute coordinate	41
2.5 Parametric equations	43
2.6 Implicit equations	45
2.7 Incidence with coordinates	47
2.8 Determination and matrices of a projectivity	52
2.9 Cross ratio	56
2.10 Harmonic sets	62
2.11 Projective classification	66
2.12 Exercises	67
3 Affine geometry	72
3.1 Recalling basic facts of affine geometry	72
3.2 The projective closure of an affine space	75
3.3 Affine and projective coordinates	78
3.4 Affine linear varieties	81
3.5 Affine transformations, affine ratio	85

3.6	Affine geometry in the projective frame	89
3.7	The Erlangen Program	94
3.8	Exercises	96
4	Duality	100
4.1	The space of hyperplanes	100
4.2	Bundles of hyperplanes	101
4.3	The principle of duality	106
4.4	Hyperplane coordinates	111
4.5	The dual of a projectivity	117
4.6	Biduality	119
4.7	Duals of linear varieties and bunches	121
4.8	Exercises	122
5	Projective transformations	124
5.1	Complex extension of a real projective space	124
5.2	Equations of projectivities between lines	136
5.3	Projectivities between distinct lines	137
5.4	Pairs of points on projective lines	143
5.5	Projectivities of a line	145
5.6	Involutions	153
5.7	Fixed points of collineations	160
5.8	Correlations	173
5.9	Projectivities and perspectivities	180
5.10	Singular projectivities	182
5.11	Exercises	187
6	Quadric hypersurfaces	193
6.1	The notion of quadric	193
6.2	Quadrics of \mathbb{P}_1	203
6.3	Tangent lines	204
6.4	Conjugation	207
6.5	Non-degenerate quadrics. Polarity	218
6.6	Non-degenerate quadric envelopes	224
6.7	Degenerate quadrics. Cones	227
6.8	Degenerate quadric envelopes	234
6.9	The absolute quadric	238
6.10	Exercises	249

7	Classification and properties of quadrics	256
7.1	Projective reduced equations of quadrics	256
7.2	Projective classification of quadrics	260
7.3	Determining quadrics by their sets of points	268
7.4	Interior and exterior of quadrics	272
7.5	Quadrics of affine spaces	277
7.6	Affine reduced equations of quadrics	280
7.7	Affine classification of quadrics	284
7.8	Affine elements of quadrics	295
7.9	Exercises	302
8	Further properties of quadrics	309
8.1	Projective generation of conics	309
8.2	Projective structure on a conic	315
8.3	Lines on quadrics	328
8.4	Lines of \mathbb{P}_3	339
8.5	Exercises	347
9	Projective spaces of quadrics	356
9.1	Effective divisors on projective lines	356
9.2	Rational curves	360
9.3	Linear systems of quadrics	365
9.4	Independence of linear conditions on quadrics	372
9.5	Pencils of quadrics	375
9.6	Pencils of conics	385
9.7	Desargues' theorem on pencils of quadrics	390
9.8	Spaces of quadric envelopes, ranges	392
9.9	Apolarity	397
9.10	Pencils and polarity	399
9.11	Rational normal curves of \mathbb{P}_n	404
9.12	Twisted cubics	420
9.13	Exercises	427
10	Metric geometry of quadrics	438
10.1	Circles and spheres	438
10.2	Metric properties of conics	442
10.3	Focal properties of conics	447
10.4	Metric properties of three-space quadrics	457
10.5	Metric reduced equations of quadrics	467
10.6	Metric invariants of quadrics	474
10.7	Metric classification of quadrics	483
10.8	Exercises	486

11 Three projective classifications	493
11.1 Polynomial matrices	493
11.2 Classification of polynomial matrices	498
11.3 Projective equivalence of collineations	505
11.4 Classification of collineations of complex projective spaces	508
11.5 Classification of collineations of real projective spaces	515
11.6 Projective classification of pencils of quadrics	520
11.7 Projective classification of correlations	538
11.8 Square roots of regular matrices	548
11.9 Exercises	550
A Perspective (for artists)	553
A.1 Basic setting and affine matter	554
A.2 Orthogonality and angles	558
A.3 Exercises	565
B Models of non-Euclidean geometries	568
B.1 Euclidean and non-Euclidean geometries	568
B.2 The models	571
B.3 Hyperbolic distance	575
B.4 Elliptic distance	579
B.5 Betweenness	582
B.6 Angles between lines	583
B.7 Circles and similar curves	588
B.8 Transformations	593
B.9 Exercises	599
Bibliography	603
Symbols	605
Index	607
