

Contents

1	Some model equations	1
1.1	The Yamabe equation	1
1.2	The KGMP and SP systems	4
1.3	The Einstein-scalar field Lichnerowicz equation	10
2	Basic variational methods	14
2.1	Some notation and basic facts	14
2.2	The variational method by minimization	15
2.3	The variational method based on the mountain pass lemma	21
2.4	A few words on the Einstein-scalar field Lichnerowicz equation	27
2.5	Solving critical equations.1	30
2.6	Playing with symmetries – The case of large potentials	37
2.7	Solving critical equations.2	38
2.8	Regularity theory	42
3	The L^p and H^1-theories for blow-up	48
3.1	The L^p -theory for blow-up	49
3.2	The H^1 -theory for blow-up	54
3.3	Proof of Theorem 3.3	58
3.4	Proof of Lemma 3.5	63
3.5	Remarks on Theorem 3.3	76
4	Blowing-up solutions in the critical case	83
4.1	The sphere model case	83
4.2	Variations on the above theme	86
4.3	Infinite energy solutions.1	92
4.4	The low-dimensional case	96
4.5	Weakly critical versus critical potentials	99
4.6	The finite dimensional reduction method in few words	102
4.7	Blowing-up solutions in arbitrary manifolds	104
4.8	Infinite energy solutions.2	108
4.9	The Yamabe equation in high dimensions	109
4.10	Blow-up type configurations	110
4.11	The model Equations	111
5	An introduction to elliptic stability	113
5.1	A first insight into elliptic stability	114
5.2	Stability and standing waves for NLS and NKG	119
5.3	The subcritical case of stationary Schrödinger's equations	120

5.4	Various notions of stability in the critical case	122
5.5	The supinf 3-dimensional inequality	125
6	Bounded stability	129
6.1	Blow-up theory in the one-bubble model case	131
6.2	A Riemannian version of the Pohozaev identity	147
6.3	Blow-up theory in the one-bubble model case (continued)	149
6.4	Proof of Theorem 6.1	162
6.5	Proof of Theorem 6.3	173
6.6	The Brézis-Li uniqueness result	175
6.7	Compactness for the Yamabe equation and Theorem 6.2	177
7	The C^0-theory for blow-up	180
7.1	A first set of pointwise estimates	182
7.2	Proof of the upper estimate in Theorem 7.1	198
7.3	Basic computations	229
7.4	Proof of Theorem 7.2 and of the lower estimate in Theorem 7.1	237
7.5	Coercivity is a necessary assumption	243
8	Analytic stability	245
8.1	Proof of Theorems 8.1 and 8.2 in the conformally flat case	247
8.2	The range of influence of blow-up points	255
8.3	Proof of Theorems 8.1 and 8.2 in the general case	266
8.4	Blow-up in the 6-dimensional case	279
8.5	The model Equations	281
	Bibliography	285
