

Contents

Preface	v
Introduction	xi
1 Sophus Lie, a giant in mathematics	1
<i>Lizhen Ji</i>	
2 Felix Klein: his life and mathematics	27
<i>Lizhen Ji</i>	
3 Klein and the Erlangen Programme	59
<i>Jeremy J. Gray</i>	
4 Klein’s “Erlanger Programm”: do traces of it exist in physical theories?	77
<i>Hubert Goenner</i>	
5 On Klein’s So-called Non-Euclidean geometry	91
<i>Norbert A’Campo, Athanase Papadopoulos</i>	
6 What are symmetries of PDEs and what are PDEs themselves?	137
<i>Alexandre Vinogradov</i>	
7 Transformation groups in non-Riemannian geometry	191
<i>Charles Frances</i>	
8 Transitional geometry	217
<i>Norbert A’Campo, Athanase Papadopoulos</i>	
9 On the projective geometry of constant curvature spaces	237
<i>Athanase Papadopoulos, Sumio Yamada</i>	
10 The Erlangen program and discrete differential geometry	247
<i>Yuri B. Suris</i>	
11 Three-dimensional gravity – an application of Felix Klein’s ideas in physics	283
<i>Catherine Meusburger</i>	
12 Invariances in physics and group theory	307
<i>Jean-Bernard Zuber</i>
