Acknowledgments	vii
Introduction	1
1 Étude on the flat case: $S^1 \times S^1$	3
2 Plane hyperbolic geometry	7
3 Simple closed geodesics and systoles	13
4 Fenchel–Nielsen coordinates	19
5 Dehn twists	25
6 Normal generators for mapping class groups	31
7 Measured foliations	37
8 The $(9g - 9)$ -theorem for measured foliations	45
9 Compactification of Teichmüller space	49
10 Classification of mapping classes	55
11 Perron–Frobenius theory	61
12 Pseudo-Anosov maps with small stretch factor	65
Bibliography	71
Index	75
