Abstract. Linear algebraic groups is an active research area in contemporary mathematics. It has rich connections to algebraic geometry, representation theory, algebraic combinatorics, number theory, algebraic topology, and differential equations. The foundations of this theory were laid by A. Borel, C. Chevalley, J.-P. Serre, T. A. Springer and J. Tits in the second half of the 20th century. The Oberwolfach workshops on algebraic groups, led by Springer and Tits, played an important role in this effort as a forum for researchers, meeting at approximately 3 year intervals since the 1960s. The present workshop continued this tradition, covering a range of topics, with an emphasis on recent developments in the subject.

Introduction by the Organisers

The theory of linear algebraic groups originated in the work of E. Picard in the mid-19th century. Picard assigned a “Galois group” to an ordinary differential equation. This construction was developed into what is now known as “differential Galois theory” by J. F. Ritt and E. R. Kolchin in the 1930s and 40s. Their work was a precursor to the modern theory of algebraic groups, founded by A. Borel, C. Chevalley, J. P. Serre, T. A. Springer and J. Tits in the second half of the 20th century. The Oberwolfach workshops on algebraic groups, originated by Springer and Tits, played an important role in this effort as a forum for researchers, meeting at regular intervals since the 1960s.

The present workshop continued this tradition. There were 53 participants from 10 countries: Australia, Canada, Denmark, France, Germany, Great Britain,
Italy, the Netherlands, Russia, Switzerland and the United States. The scientific program consisted of 27 lectures and a problem session. The lectures covered a broad range of topics of current interest, including

- spherical varieties over the complex and real numbers,
- intersection theory of toric and spherical varieties, tropical geometry and Newton-Okounkov theory,
- homogeneous spaces and their twisted forms,
- Hessenberg varieties,
- geometric invariant theory,
- Tamagawa numbers,
- quiver varieties, R matrices and related algebras
- cluster varieties with relations to representation theory
- tilting modules,
- structure theory of finite-dimensional Lie algebras in finite characteristic,
- infinite-dimensional Lie algebras.

Recreational activities during the workshop consisted of the traditional Wednesday afternoon hike and a Thursday night “talent show”, featuring classical piano and vocal performances by workshop participants.

Acknowledgement: The MFO and the workshop organizers would like to thank the National Science Foundation for supporting the participation of junior researchers in the workshop by the grant DMS-1049268, “US Junior Oberwolfach Fellows”.
Workshop: Algebraic Groups

Table of Contents

Michel Brion
The isogeny category of commutative algebraic groups ............... 1285

Philippe Gille (joint with Vladimir Chernousov, Arturo Pianzola)
Classification of torsors over Laurent polynomials .................. 1287

Henrik Schlichtkrull (joint with Friedrich Knop, Bernhard Krötz, Tobias Pecher)
Classification of reductive real spherical pairs ............... 1290

Askold Khovanskii (joint with Boris Kazarnovskii)
Newton polyhedra, tropical geometry and the ring $R_n(\Lambda)$ .......... 1292

Kiumars Kaveh (joint with Christopher Manon)
Gröbner theory, tropical geometry and spherical varieties .......... 1295

Alexander Premet (joint with David Stewart)
Maximal Lie subalgebras of exceptional Lie algebras in good characteristic 1298

Simon Riche (joint with Pramod N. Achar, Shotaro Makisumi and Geordie Williamson)
Modular Koszul duality for constructible sheaves on flag varieties .......... 1299

Geordie Williamson (joint with George Lusztig)
On tilting characters for $\text{SL}_3$ .................................. 1301

Nicole Lemire (joint with Caroline Junksins, Daniel Krashen)
Twisted Grassmannians and Torsion in codimension 2 Chow groups ... 1304

Kirill Zainoulline
The $K$-theory of versal flags and cohomological invariants of semisimple linear algebraic groups .......................... 1306

Nikita Karpenko
Chow rings of generic flag varieties ................................ 1308

Oksana Yakimova (joint with László Héthelyi and Magdolna Szöke)
Fusion systems on Lie algebras ........................................ 1309

Patrick Brosnan (joint with Timothy Chow)
The Shareshian-Wachs Conjecture ................................... 1310

Zev Rosengarten
Tamagawa numbers of linear algebraic groups over function fields ...... 1313

Eric Vasserot (joint with Olivier Schiffmann)
$R$-matrices and cohomological Hall algebras ........................ 1316
Gerhard Röhrle (joint with M. Bate, S. Herpel, and B. Martin)

Cocharacter-closure and the rational Hilbert-Mumford Theorem ........ 1317

Anthony Henderson

Involutions on the affine Grassmannian and moduli spaces of principal bundles ................................................. 1320

Catharina Stroppel (joint with Vassily Gorbounov, Christian Korff)

R-matrices and convolution algebras arising from Grassmannians .... 1322

Daniel Juteau (joint with Stephen Griffeth)

Support of the spherical module of rational Cherednik algebras ...... 1325

Bea Schumann (joint with Volker Genz and Gleb Koshevoy)

Combinatorics of canonical bases and cluster duality ............... 1325

Jacinta Torres (joint with Bea Schumann)

Non-Levi branching rules via Littelmann paths: a new approach ...... 1327

David Hernandez

Spectra of quantum integrable systems, Langlands duality and category \( \mathcal{O} \) for quantum affine algebras .................................................. 1329

Nicolas Ressayre

On the tensor semigroup of affine Kac-Moody Lie algebras .......... 1333

Stéphane Gaussen (joint with Nicole Bardy-Panse and Guy Rousseau)

Macdonald’s formula for Kac-Moody groups over local fields ........ 1336

Shrawan Kumar

Representation ring of Levi subgroups versus cohomology ring of flag varieties .................................................. 1338

Claudio Procesi (joint with E. Aljadeff, A. Giambruno, and A. Regev)

Non commutative algebra and invariant theory .......................... 1340
