**Mini-Workshop: The Willmore Functional and the  
Willmore Conjecture**

Organised by  
Tobias Lamm, Karlsruhe  
Jan Metzger, Potsdam  
Andre Neves, London

21 July – 27 July 2013

ABSTRACT. The Willmore functional evaluated on a surface immersed into Euclidean space is given by the  $L^2$ -norm of its mean curvature. The interest for studying this functional comes from various directions. First, it arises in applications from biology and physics, where it is used to model surface tension in the Helfrich model for bilipid layers, or in General Relativity where it appears in Hawking's quasi-local mass. Second, the mathematical properties justify consideration of the Willmore functional in its own right. The Willmore functional is one of the most natural extrinsic curvature functionals for immersions. Its critical points solve a fourth order Euler-Lagrange equation, which has all minimal surfaces as solutions.

**Introduction by the Organisers**

In recent years there has been substantial progress concerning analytical and geometrical questions related to the Willmore functional. Highlights include the study of surfaces with square integrable second fundamental form, the compactness of  $W^{2,2}$ -conformal immersions, the regularity of weak solutions of the Willmore equation and the resolution of the longstanding Willmore conjecture.

The aim of this mini-workshop was to bring together people involved in propelling the above mentioned research highlights. In particular, our intention was to make a connection between the experts on minimal surfaces and corresponding min-max techniques that were a crucial ingredient in the proof of the Willmore conjecture, and the experts for the analysis developed for second order curvature functionals such as the Willmore functional.

For this purpose two mini-courses were delivered by Fernando Marques (Min-max theory and the Willmore conjecture) and Tristan Rivière (The variations of the Willmore Lagrangian, a parametric approach). Moreover, every participant gave a talk, with plenty of time left for discussions.

## Mini-Workshop: The Willmore Functional and the Willmore Conjecture

### Table of Contents

Fernando Codá Marques (joint with André Neves, Imperial College - UK) <i>Min-max theory and the Willmore conjecture</i> . . . . .	2123
Tristan Rivière (joint with Yann Bernard, Laura Keller, Paul Laurain and Andrea Mondino) <i>The variations of Willmore Lagrangian, a parametric approach</i> . . . . .	2124
Rob Kusner <i>Scherk's surface and the large-genus limit of the Willmore Problem</i> . . . .	2125
Ernst Kuwert (joint with Tobias Lamm and Yuxiang Li) <i>Two-dimensional curvature functionals with superquadratic growth</i> . . . .	2126
Ben Sharp <i>Regularity theory for a class of critical Cauchy-Riemann-type PDE and its relationship to harmonic maps and conformal immersions in two dimensions</i> . . . . .	2128
Mario Micaleff (joint with Vlad Moraru) <i>Area comparison in manifolds with a lower bound on the scalar curvature</i>	2130
Reto Müller (joint with R. Haslhofer) <i>Dynamical stability and instability of Ricci-flat metrics</i> . . . . .	2131
Yuxiang Li <i>Some applications of <math>W^{2,2}</math> conformal immersions to the Willmore functional</i> . . . . .	2133
André Neves (joint with Fernando Marques) <i>Min-max Theory in Geometry</i> . . . . .	2134
Ivaldo Nunes (joint with Davi Maximo) <i>A local rigidity result for the deSitter-Schwarzschild space</i> . . . . .	2135
Felix Schulze (joint with Tom Ilmanen, André Neves) <i>A local regularity theorem for the network flow</i> . . . . .	2137
Yann Bernard <i>Constrained Willmore Surfaces</i> . . . . .	2138
Alexander Volkman <i>A Li-Yau type inequality for free boundary surfaces with respect to the unit ball</i> . . . . .	2142
